

SPECIALIST SKILL / LEGACY MODERNIZATION

Replace the bottleneck without betting on a big rewrite.

Recover hidden business rules and migrate in controlled increments. Preserve an operating route while moving components and data onto a foundation the team can support.

WHAT WE CAN BUILD FOR YOU

Replace one legacy business capability

Map dependencies and implement an incremental migration with parallel running where needed.

Value: The business can verify the replacement before transferring responsibility to it.

A controlled data and application cutover

Prepare migration steps, comparison checks and a runbook for the transition.

Value: The team knows what must match, when to proceed and how to respond if the cutover fails.

WHAT THE ENGAGEMENT INCLUDES

- | System archaeology
- | Strangler-pattern migration
- | Data migration
- | Parallel running

WHAT YOU TAKE AWAY

- | Migration plan
- | Migrated components
- | Cutover runbook

HOW WE MAKE THE VALUE VISIBLE

Migrated capability / Data mismatches / Cutover incidents

ILLUSTRATIVE APPLICATIONS / SCOPED TO YOUR SYSTEMS

Let's scope the first useful step.

Bring the component blocking change, its dependencies and the business windows available for migration.
