

SOLUTION / ARCHITECTURE & TECHNICAL DILIGENCE

Know what you are buying – or rebuilding.

A confident technical story is not enough when capital or a major programme is at stake. BELTO reconstructs the system from evidence, challenges material assumptions and gives leadership a prioritized decision record.

WHAT WE CAN BUILD FOR YOU

Technical diligence ahead of a deal

Review repositories, architecture and roadmap claims, then produce findings with confidence and consequences.

Value: Decision-makers know which claims stand up and which need further evidence.

A roadmap reality check

Assess dependencies and engineering work behind a proposed product or scaling plan.

Value: The next commitment can be sized around actual delivery constraints.

Choose this before a transaction, rewrite or scaling commitment when the decision matters more than adding delivery capacity.

WHAT YOU RECEIVE

Executive technical position / Architecture and dependency map / Prioritized risk register / Sequenced 90-day action plan

Delivery: Decision framing / Evidence collection / System reconstruction / Risk analysis / Decision workshop

HOW WE MAKE THE VALUE VISIBLE

Critical unknowns resolved / Evidence confidence / Actions with named owners

ILLUSTRATIVE APPLICATIONS / SCOPED TO YOUR SYSTEMS

Let's scope the first useful step.

Bring the decision deadline, the technical claims being relied on and access to the underlying evidence.
