

SPECIALIST SKILL / CLOUD & IDENTITY SECURITY

Put access back under deliberate control.

Find where identity, entitlement and configuration have drifted away from the intended trust model. Implement least-privilege access with evidence that owners can review.

WHAT WE CAN BUILD FOR YOU

Reduce standing administrative access

Map identities and reachable resources, redesign privileges and establish review responsibilities.

Value: Fewer unnecessary privileged paths and a clearer explanation of who can do what.

Review a growing cloud estate

Inspect cloud configuration and identity boundaries, remediate priorities and establish a baseline.

Value: Security decisions stay connected to real access paths across the environment.

WHAT THE ENGAGEMENT INCLUDES

- | Identity architecture
- | Least-privilege design
- | Configuration review
- | Monitoring

WHAT YOU TAKE AWAY

- | Identity model
- | Configuration baseline
- | Review report

HOW WE MAKE THE VALUE VISIBLE

Standing privileged access / Unreviewed entitlements / Configuration exceptions

GOOD REASONS TO START

Permission sprawl / Standing administrative access / No review of who can reach what

ILLUSTRATIVE APPLICATIONS / SCOPED TO YOUR SYSTEMS

Let's scope the first useful step.

Bring identity exports, the cloud estate boundary and the teams that approve access.
